

## Stoney Point Cemetery Layout - Explanation

There are three areas in the Stoney Point Cemetery: Old Area, Middle Area, and New Area.

### Old Area

The Old Area consists of **Rows 1-38**, which are not always straight. Each individual grave is a **Lot**, which typically run from left to right.

Rows usually begin on the left at the main road, but not always. Some rows begin partway in the middle of the area. Some rows have more lots than others. There are often blank spaces between lots, possibly unmarked graves.

### Middle Area

The Middle Area consists of "Plots" which are groups of twelve "Lots". Each plot has twelve lots, although there is only one Plot in the whole cemetery where all twelve are occupied. Most Plots only contain a few people, and some none at all as far as we know. Of course, there may be some occupants without headstones.

The Plots are numbered this way:

7	8	9	10	11	12
6	5	4	3	2	1

### Middle Area

The sections are labeled as MA through ML. The "M" stands for "middle," so basically the sections are A through L. When you walk just barely through the gate by the historical marker and look right and left, you are looking at Sections A-L for Plot 1. Section A begins on the far right. Section L is the last section to the left before the road. Across this road is the New Area.

The Plots can be thought of as row numbers and go from 1-24 so far. These Plots run from the gate to the very back of the cemetery where no one has been buried yet. Only a few people have been buried past the last road. One tricky part about Plots, is that a plot is twelve lots, except for Plots 1,2, and 3. These only have six. The middle area is interrupted by the Old Area, so most graves in the middle area are in Sections MG through ML.

### New Area

The New Area is to the left of the leftmost road (so far the leftmost road). The new area is also made of Plots of twelve Lots. As with the middle area, the Section begins with A on the rightmost, next to the road. B, C, D, etc. then go out to the left. There are metal Plot markers, but they have been buried during the mowing so you would have to make a metal detector to find them.
